

*A CHRISTMAS TREE  
FIRE SAFETY MESSAGE  
from the  
Ft. Wood Fire Department*

# Avoid a Christmas Tree Inferno

A Christmas tree fire can make a home deadly and escape impossible in less than one minute.

Each year these fires account for:

- ☀ 33 deaths
- ☀ Serious injuries to 112 people
- ☀ Over \$21 million dollars in damage

# Christmas Tree Safety

- ❖ Non-Metallic UL or FM Listed Fire Resistant Artificial Trees are the safest.
- ❖ Metallic artificial trees present an increased risk of electric shock.

# Real Trees

- ✧ If you insist on a real tree choose a fresh one.
- ✧ Tap the trunk on the ground and shake the tree.
- ✧ Very few, if any needles should fall off.

# Christmas Tree Safety

- ✿ Cut the bottom two inches of the trunk off and immediately place the tree in water.
- ✿ The stand should be sturdy and the tree kept away from heat sources such as fire places, heaters, vents and candles.

# Christmas Trees Burn Rapidly

☀ Don't place them near exits or hallways.

☀ Dry trees ignite easily.

☀ Water the tree daily.

☀ A 6 foot tree will absorb a gallon of water every two days!

# Light the Tree Safely

Never light a tree with  
candles!

- ☀ Use only lights designed for indoor use.
- ☀ Use lights with a label by a recognized testing authority (UL or FM).
- ☀ Never connect more than three strands together or to the same outlet.

If the tree starts dropping several needles it has become too dry!

- ✿ Its time to take the tree down.
- ✿ Dispose of it properly.
- ✿ Don't dispose of the tree in the fire place!
